

Life below the water

- Every day approximately 8 million pieces of plastic pollution find their way into our oceans

- 1,065,171 plastic cups, bottles and emptied into the sea.

Over 100 million marine animals are killed by pollution each year

Would you like your habitat to look like this? But this could be prevented and reversed by just doing some daily changes in our lives.

- **A beach clean would help, gather people you know or create an event to meet and clean your local beach area.**

Start with recycling in your home, cut out plastic waste and reuse plastic. If each home did a little bit of this each day millions of animals would be saved in the habitat.

My family and I all recycle we wash all the tubs and bottles out, Our recycling is picked up every 2weeks.

Would you like your habitat to look like this? But this could be prevented and reversed by just doing some daily changes in our lives.

This is important to me because I love to see animals in their natural habitat without and of them in danger, I live in my nice clean house in no danger and animals shouldn't be any different especially when something as small as recycling can stop this :)

Would you like your habitat to look like this? But this could be prevented and reversed by just doing some daily changes in our lives.
